

FIRE, SMOKE & WATER RESTORATION

*At Paradise Builders
we have 24/7 service
to help you with these
unforeseen emergencies.*

BEHAVIOR OF SMOKE

A fire loss is very complex because of the unique behavior of smoke. It is important to have trained technicians at the loss location. Paradise Builders Restoration Technicians know their smoke!

TYPES OF SMOKE

The first step at a fire scene is to calm the fears of those affected. Next, SERVPRO tests the smoke to see which of the following types of fire took place.

- **Wet Smoke** - Low heat, smoldering, pungent odor, sticky, smeary. Smoke webs are more difficult to clean.
- **Dry Smoke** - Fast burning at high temperatures.
- **Protein** - Virtually invisible, discolors paints and varnishes. Extreme pungent odor.
- **Fuel Oil Soot** - Furnace puff backs cause fuel oil soot.
- **Other Types** - Tear gas, fingerprint powder, and fire extinguisher residue are other types.

Paradise Builders offers *Water Damage Restoration and Mold Remediation* services 24 hours a day 365 days a year. Our immediate response teams of certified and experienced water damage restoration technicians will get your water damage restoration project back to normal.
